

CROWD CONTROLLERS 4 IN 1 PEN

Throughout Queensland there are thousands of fake identification documents being passed to crowd controllers and law enforcement officers each year. In recent times the task of identifying these documents within licensed premises in particular have become more difficult, especially with regards to the production of international drivers licenses and passports to gain entry.

The crowd controller 4 in 1 pen makes it easier, whilst portraying a professional image to patrons. With a bright LED light the document can be viewed under appropriate lighting conditions, the security features of the document can then be view using the LED ultra violet lights (UV) of such a frequency to reveal those features not visible to the naked eye. The crowd controller 4 in 1 then can be used to identify patrons to other team members should an eviction be required through the use of the torches bright laser pointer and then write up the required incident register.

On-line orders and payments of \$19.95 (Including GST) can be made through our secure website
